Income-Based Repayment Calculator (15% version)

This calculator compares the cost of repaying Federal student loans using the [Income-Based Repayment](#) (IBR) option and the standard repayment option, including the [net present value](#) of those payments.

The Income-Based Repayment option was proposed as part of the College Cost Reduction and Access Act of 2007 and became available on July 1, 2009.

The monthly loan payments are capped at 15% of discretionary income with forgiveness of any remaining debt (including accrued but unpaid interest) after 25 years. Discretionary income is defined as the amount by which adjusted gross income exceeds the poverty line.

The Health Care and Education Reconciliation Act of 2010 established an improved version of the income-based repayment plan for new borrowers of new loans made on or after July 1, 2014. The improved income-based repayment plan cuts the monthly loan payments by one third from 15% of discretionary income to 10% of discretionary income and accelerates loan forgiveness from 25 years to 20 years. Please use the [10% version of the income-based repayment calculator](#) for borrowers who qualify for the improved income-based repayment plan.

Please click on the field names for help in using this calculator. For more information about discount rates, see also the discussion of [net present value](#).
